

"NON-STOP LANDSCAPE", Medellin, Colombia

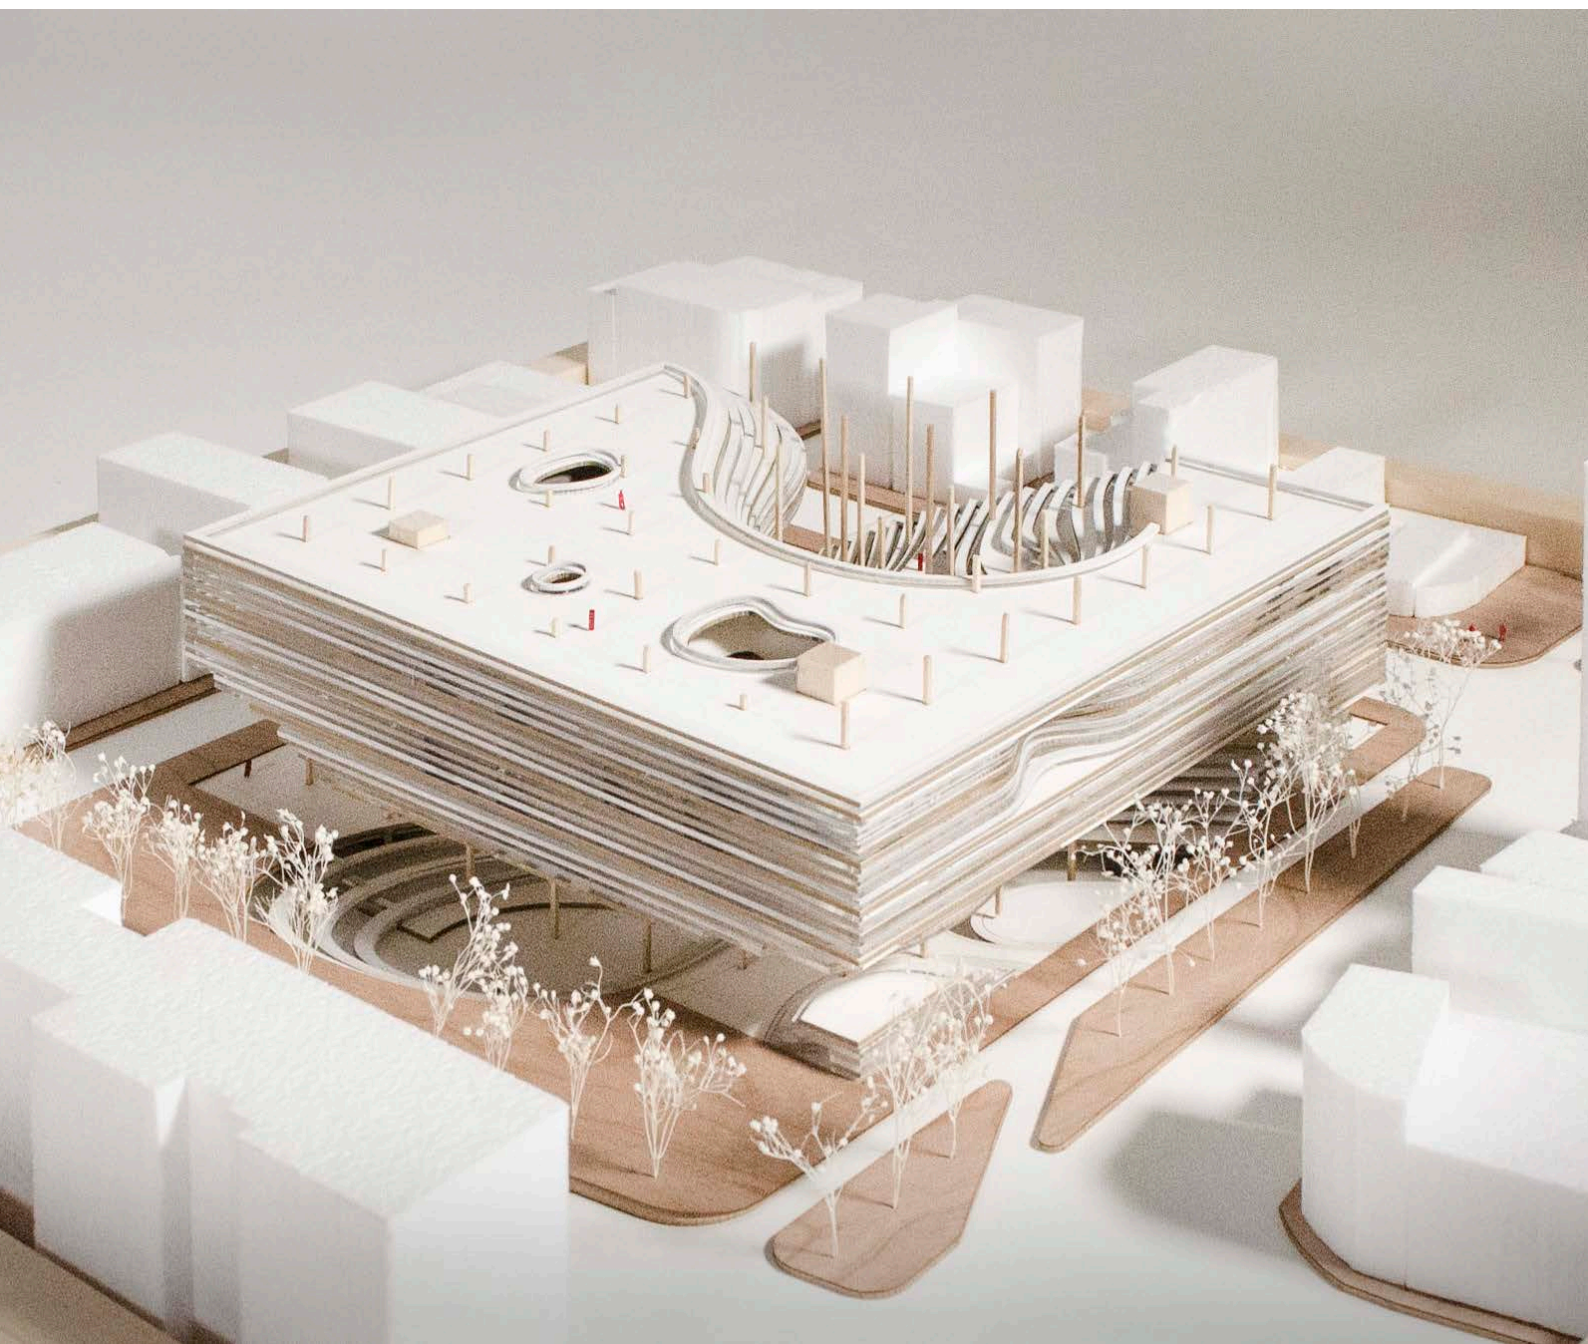

Fall 2016 Harvard GSD | Instructor: Camilo Restrepo | Option Studio

Set in the **city center of Medellin, Colombia**, across the street from Museo Antioquia, this "Non-Stop Landscape" mixed-use building seeks to bring activities to this passive space and turn it into a social hub. The program includes 30% housing, 20% hotel, 30% cultural center, 10% market and 10% healthcare.

By using a **curve language** that brings together all mixed-use programs and carving out public space

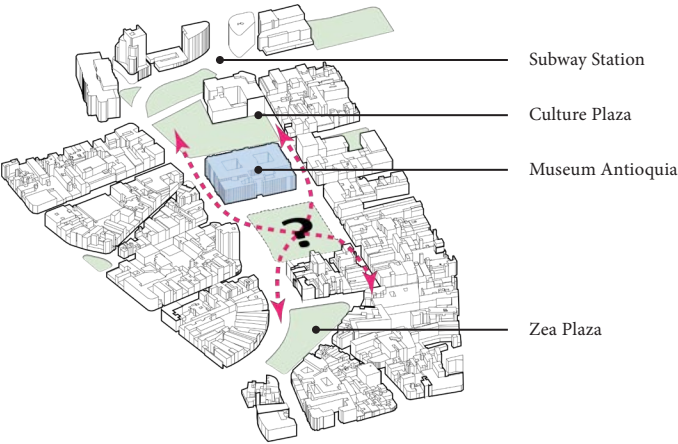

in this volumetric cube, this project is conceived as a **continuous artificial landscape** that leads people to explore both horizontally and vertically - till to the very top, the roof garden with a panoramic view of the surrounding city context.

The use of **lamellas**, spaced 0.5m apart, as both the facade and stairs of the building, gives the reading of a continuous landscape that **generates fluidity in this otherwise passive urban space**.

Model Photo (Axonometric Views By Floors)

In this series of model photos, the building was broken down by floors. The first floor **fosters circulation at an urban level** by creating passages across the site (refer to Site Strategy diagram); it also creates a converging place for people with programs like cafeteria, exhibition and market. The second floor hovers above the first floor, broken into 2 parts - one is cultural center and the other half is a gym. The third floor unites the

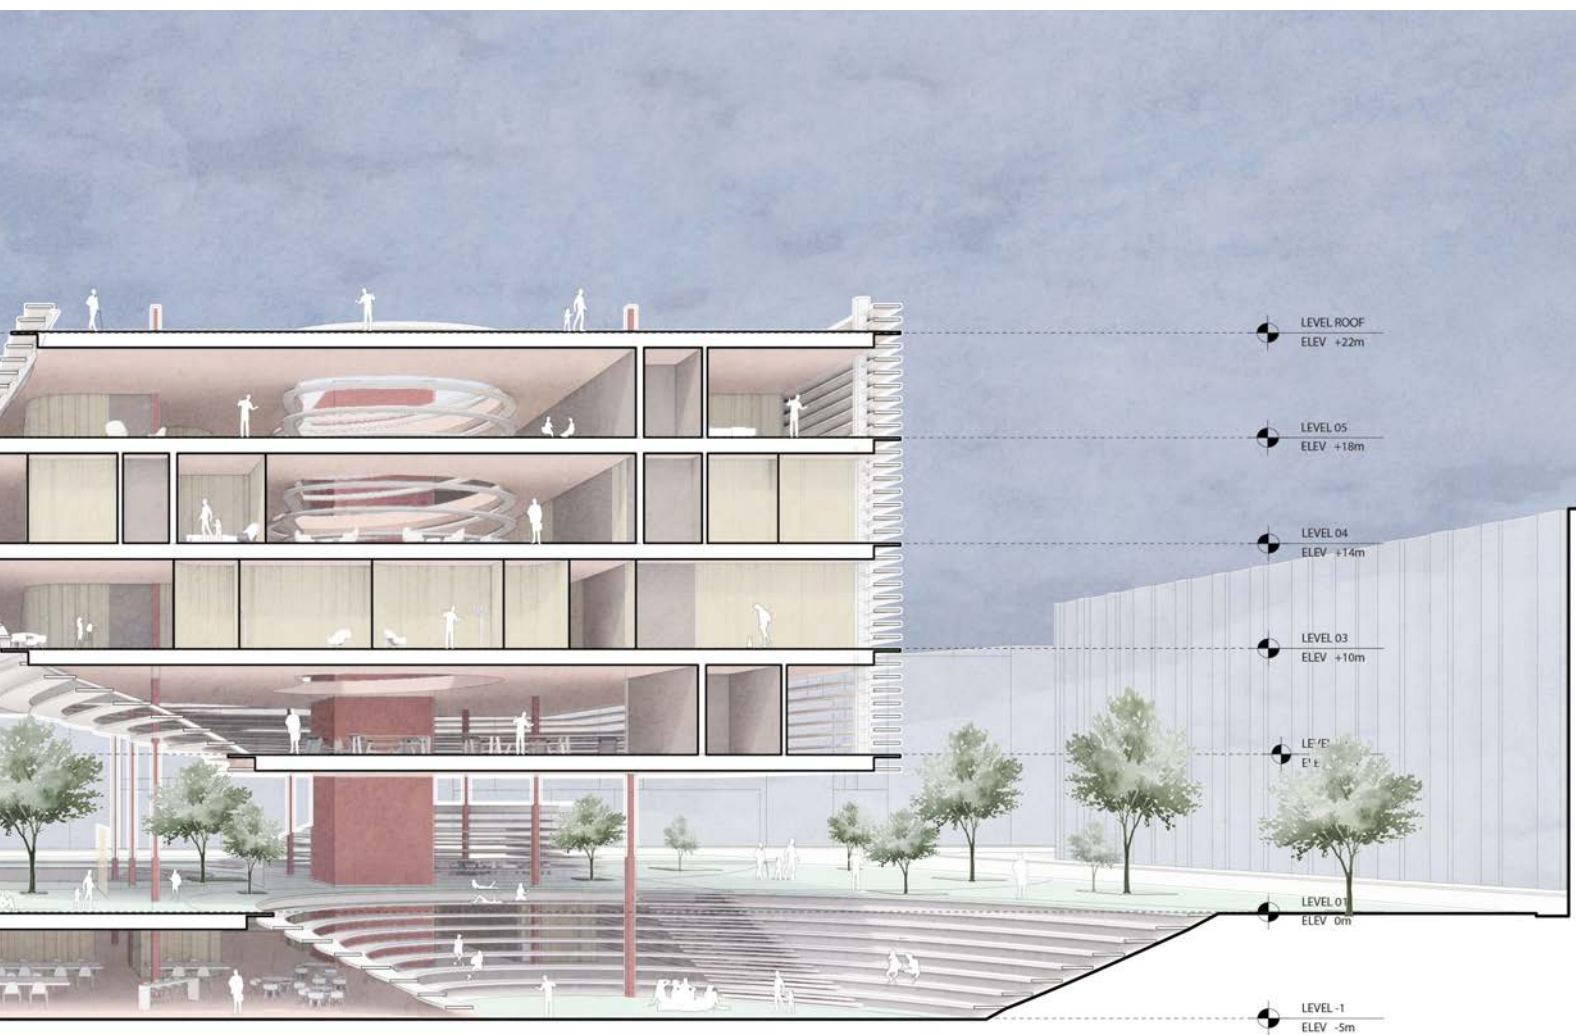

two parts of the second floor into a whole and consists of cultural center, hotel and housing programs. The concept here is to **use the same organizing principle to create a variety of programs**, which is to have some fixed linear enclosed bars as back-of-house space, and curtain partition around them as **flexible program space**.

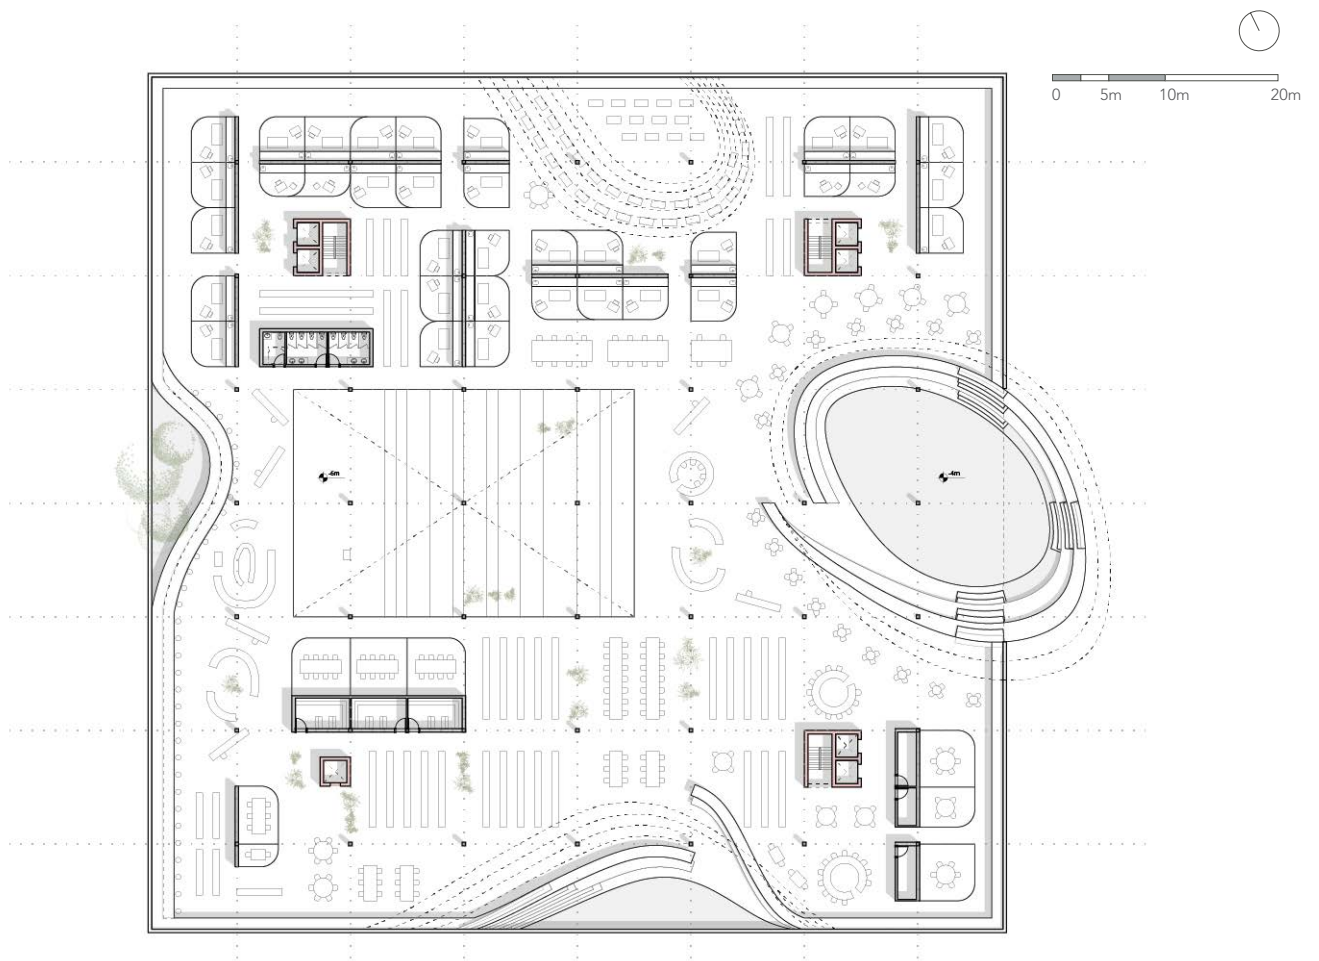

Section Perspective Through Site

This section cuts through the site and shows how the building respond to adjacent conditions. By having porous ground floor, it allows for fluid circulation at urban scale.

The section also shows the how the fins act as shading / facade for the building, and in some parts become steps for fluid vertical circulation.

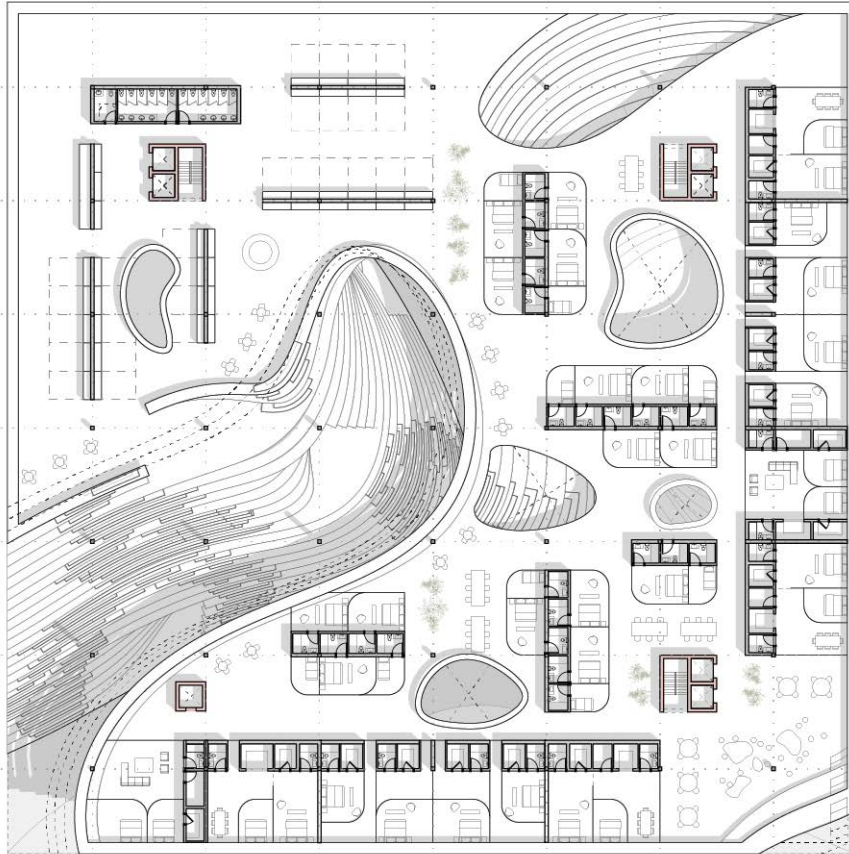

LEVEL-1 -4M MARKET + CULTURAL CENTER + HEALTH CARE

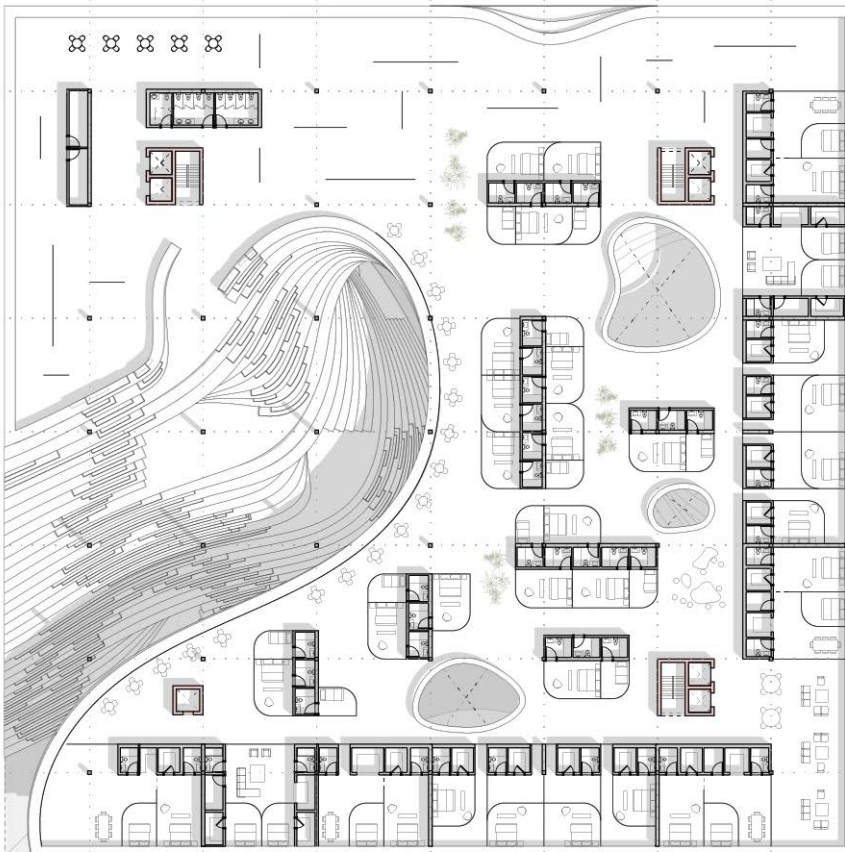

LEVEL2 6M CULTURAL CENTER + GYM

LEVEL3 10M CULTURAL CENTER + HOUSING + HOTEL

LEVEL4 14M STORE + HOUSING + HOTEL

Northeast Corner Approach Collage

The **ground floor** acts as an **open plaza** for various activities including **gathering, exhibition, performance and market exchange**. It allows for people

both to pass by without obstacles in the way and to linger for other activities.

Ground Floor Public Space Collage

The floor plans are all based on a 10m by 10m regular column grid. **Interior spaces** (despite different programs) are organized based on the same strategy

of **fixed service cores and movable curtain partitions**, so that they may be **resized or adapted for different uses** over time.
